

Applications of Combinatorics and Graph Theory to the Biological and Social Sciences (The IMA Volumes in Mathematics and its Applications) (v. 17)

This volume is the Proceedings of a Workshop on the applications of Combinatorics and graph theory in the biological and social sciences, held at the Institute for Mathematics and its Applications in January 1988. Combinatorial and graph-theoretical methods are increasingly important in the biological and social sciences. The Workshop emphasized mathematical techniques and open problems arising in such fields as ecology, genetics, enzyme kinetics, economics, political science, sociology, and psychology.
