

An Essay on the Importance of Being Nonlinear (Lecture Notes in Biomathematics)

One of my favorite quotes is from a letter of Charles Darwin (1887): I have long discovered that geologists never read each others works, and that the only object in writing a book is proof of earnestness, and that you do not form your opinions without undergoing labour of some kind. It is not clear if this private opinion of Darwin was one that he held to be absolutely true, or was one of those opinions that, as with most of us, coincides with our bad days, but is replaced with a more optimistic view on our good days. I hold the sense of the statement to be true in general, but not with regard to scientists never reading each others work. Even if that were true however, the present essay. would still have been written as a proof of earnestness. This essay outlines my personal view of how nonlinear mathematics may be of value in formulating models outside the physical sciences. This perspective has developed over a number of years during which time I have repeatedly been amazed at how an accepted model would fail to faithfully characterize the full range of available data because of its implicit or explicit dependence on linear concepts. This essay is intended to demonstrate how linear ideas have come to dominate and therefore limit a scientists ability to understand any given class of phenomena.

An essay on the importance of being nonlinear. Lecture Notes in Download Chapter (6,049 KB). Chapter. An Essay on the Importance of Being Nonlinear. Volume 62 of the series Lecture Notes in Biomathematics pp 65-135 **An essay on the importance of being nonlinear / Bruce J.
