# Selectors

Though the search for good selectors dates back to the early twentieth century, selectors play an increasingly important role in current research. This book is the first to assemble the scattered literature into a coherent and elegant presentation of what is known and proven about selectors--and what remains to be found. The authors focus on selection theorems that are related to the axiom of choice, particularly selectors of small Borel or Baire classes. After examining some of the relevant work of Michael and Kuratowski & Ryll-Nardzewski and presenting background material, the text constructs selectors obtained as limits of functions that are constant on the sets of certain partitions of metric spaces. These include selection theorems for maximal monotone maps, for the subdifferential of a continuous convex function, and for some geometrically defined maps, namely attainment and nearest-point maps. Assuming only a basic background in analysis and topology, this book is ideal for graduate students and researchers who wish to expand their general knowledge of selectors, as well as for those who seek the latest results.

**Selectors Stylus** The following selectors are based on the Cascading Style Sheet 1 specification, as outlined by the W3C. For more information about the specifications, visit **Type selectors - CSS MDN** Feb 26, 2017 Selectors define to which elements a set of CSS rules apply. **Selectors** This page explains how selectors work and describes their API which is very small and simple, unlike the lxml API which is much bigger because the lxml library **Selectors - Learn web development MDN** CSS Selectors. In CSS, selectors are patterns used to select the element(s) you want to style. Use our CSS Selector Tester to demonstrate the different selectors. **CSS Syntax and Selectors - W3Schools** Jan 26, 2017 CSS type selectors match elements by node name. Used alone, therefore, a type selector for a particular node name selects all elements of that **Attribute jQuery API Documentation** The W3C CSS specification contains the complete set of rules regarding valid CSS selectors.
