

Differential Equations

A transformational work of magic realism. This evocative, moving, and gorgeously detailed novel is the story of Alex Soberano, a contemporary man in crisis. A tremendously successful New York businessman, Alex finds it difficult to embrace joy and accept love. When his life threatens to boil over, he escapes for a brief respite on the West Coast. What waits for him there is something he never could have imagined. Intertwined with Alex's story are the stories of three people from different times and places whose lives affect him in surprising ways: A woman from the South American city of Anhele in 1928 that everyone knows as Vidente. For decades, Vidente, has been one of Anhele's most celebrated citizens because she has the ability to read colors that speak of a person's fate. However, during one such reading, she sees her own future—a future that includes her imminent death. A man named Khaled who left his home in Bethlehem in 1920 to seek fortune in the South American town of Joya de la Costa. He has barely begun to gain a foothold when he learns that the wife and three children he left behind have been murdered. When a magical woman enters his life, he believes that destiny has smiled on him. However, destiny has only just begun to deal with Khaled. A nineteen-year-old student named Dro who flies from the South American country of Legado to Boston in 1985 and immediately walks onto the campus of MIT expecting instant admission. Dro's skills at mastering complex, ever-changing differential equations intrigues the associate admissions director. However, the person he intrigues the most is the celebrated US ambassador from his country, and his relationship with her will define his life. How the stories of these four people merge is the central mystery of this arresting work of imagination. DIFFERENTIAL EQUATIONS is a story that will sweep

you up in its magic, enrich you with its wisdom, and compel you with its deep humanity. Like eating a fresh lime sorbet with saltwater in your (sex-tousled) hair. Smallgood Hearth Reminds us how intricately we are all tethered together. Lazy Day Books One of those books where you cant stop reading. It was an amazing read and I think you should give it a try. Rubys Books A very interesting story not in the least because of the way it is put together. Loved it! Hotchpotch
