

From Stonehenge to Modern Cosmology

How they managed to put makeup on those huge rocks..... Gred Hoyle was a distinguished and controversial British astronomer, mathematician, popularizer of science, and novelist, who rejected the big bang theory. Every cluster of galaxies, every star, every atom had a beginning, but the universe itself did not, Hoyle claimed. He coined the phrase big bang to mock the opposing model, according to which the universe originated from a spontaneous explosion. Hoyle also suggested that life had a cosmic, not terrestrial origin, and viruses could originate from certain meteor streams. He supported the anthropic principle, holding that there is a design in creation: the universe was designed in such a way as to produce life. Our existence dictates how the universe shall be, he stated, and added, a fine ego-boosting point of view on which you may travel, fare paid, to conferences all over the world. Besides scientific works, Hoyle published many science fiction novels, written in collaboration with his son, Geoffrey Hoyle.

From Stonehenge to Modern Cosmology is about archeo-astronomy. PLUS----there are L-O-A-D-S of photos and illustrations!!
