

How the Universe Got Its Spots : Diary of a Finite Time in a Finite Space

The gifted young cosmologist Janna Levin sets out to determine the size of the universe, along the way providing an intimate look at the day-to-day life of a globe-trotting physicist. Nimbly synthesizing geometry, topology, chaos, and string theories, Levin shows how the pattern of hot and cold spots left over from the big bang may one day reveal the size and shape of the cosmos. Written with originality, lucidity, and even poetry, *How the Universe Got Its Spots* is a thrilling and deeply personal communication between a scientist and the lay reader.
