

Rankin-Selberg Convolutions for $SO_{2L+1} \times GL_n$: Local Theory (Memoirs of the American Mathematical Society)

This work studies the local theory for certain Rankin-Selberg convolutions for the standard L -function of degree $2n$ of generic representations of $SO_{2\ell+1}(F) \times GL_n(F)$ over a local field F . The local integrals converge in a half-plane and continue meromorphically to the whole plane. One main result is the existence of local gamma and L -factors. The gamma factor is obtained as a proportionality factor of a functional equation satisfied by the local integrals. In addition, Soudry establishes the multiplicativity of the gamma factor (§1
