

## Mystery of Everymans Way

An expatriate American, Gregory Henry Case, is a quantum physics professor at Oxford University in London, England. His life is rather dull and predictable, until he finds a body. Naturally, the authorities examine the corpse for its DNA composition, blood type, and conducted tissue extractions. Dental records are matched up. Thus Case is then told that the cadaver in question is not an unknown person, but is Gregory H. Case himself-one hundred and fifty years in the future! Eventually, a mysterious group of astronauts, explorers from another world kidnap Case and he finds himself on a mysterious craft that rockets him into another dimension, where he meets Father Thomas Toomey, a humble archivist. Toomey then sends Case on an adventure of a life time, a hologram type existence where Case becomes the other man in a royal marriage battle. Will Gregory Henry Case survive? Find out more by reading *Mystery of Everymans Way*, where sci-fi and romance collide.
