

# Saturn

A breathtaking look at the most beautiful of all the planets with its magnificent rings and moons. From School Library Journal: An introduction to the planet and its major satellites. Despite the strength of the text, it is the color photos that steal the show, highlighting [the] planets exotic beauty in much the same way that black-and-white photography accented the moons starkness. In all, a delightful coupling of sound exposition with dazzling illustrations.

**SATURN - Soo! muss Technik Cassini: The Grand Finale** The rings of Saturn have puzzled astronomers since Galileo Galilei discovered them with his telescope in 1610.
