

Consciousness and the universe

Is consciousness an epiphenomenal happenstance of this particular universe? Or does the very concept of a universe depend upon its presence? Does consciousness merely perceive reality, or does reality depend upon it? Did consciousness simply emerge as an effect of evolution? Or was it, in some sense, always out there in the world? These questions and more, are addressed in this special edition. FEATURING

Consciousness and the Universe About the Editors Dr. Penrose shared the Wolf Prize in physics with Stephen Hawking, and is renowned world-wide for his work in general relativity, quantum mechanics, geometry and consciousness. He is the author of many important papers and books including The Emperor's New Mind, Shadows of the Mind, The Road to Reality, and his latest Cycles of Time, which proposes serial universes. Dr Stuart Hameroff, of the University of Arizona, is a world famous consciousness researcher and organizer of the conference series Toward a Science of Consciousness.
