

The Wreck of the Godspeed: And Other Stories

Providing new insights into the human psyche, this remarkable collection gathers 13 cutting-edge tales of science fiction that reveal both the dark and light side of progress. In the Nebula award-winner, *Burn*, an idyllic planet wrestles with ecological responsibility and terrorism, while the problems and temptations of a happy virtual reality are examined in *The Dark Side of Town*. Colorful pilgrims travel to new worlds until their ships' artificial intelligence begins to act strangely in the namesake, *The Wreck of the Godspeed*, and the extent that future television programs will go to get ratings is explored in *The Leila Torn Show*. Combining hard technology with complex, character-based dilemmas, each inventive narrative shares the message that science is not a panacea and often leads to personal decisions that are neither clear nor easy.
